Title: iPhone – How to use my iPhone as a WiFi hotspot and to tether a device.docx

Created By: Jack Barron

Date: March 24, 2020

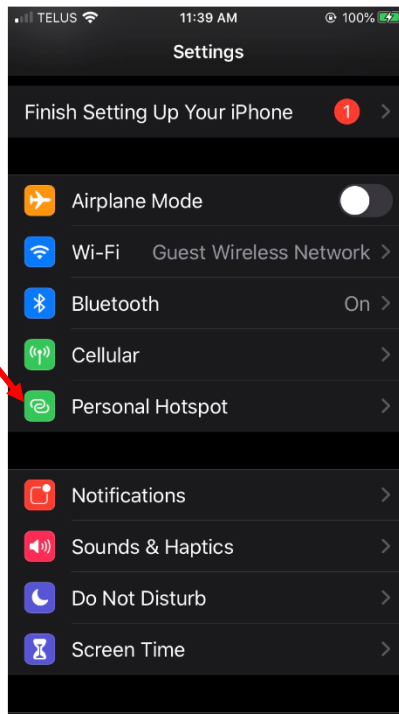

A Personal Hotspot allows you to share your cellular data connection of your iPhone to another device when you don't have access to a Wi-Fi network.

To set up your personal Hotspot

1. Go to the settings icon on your phone

2. Personal Hotspot

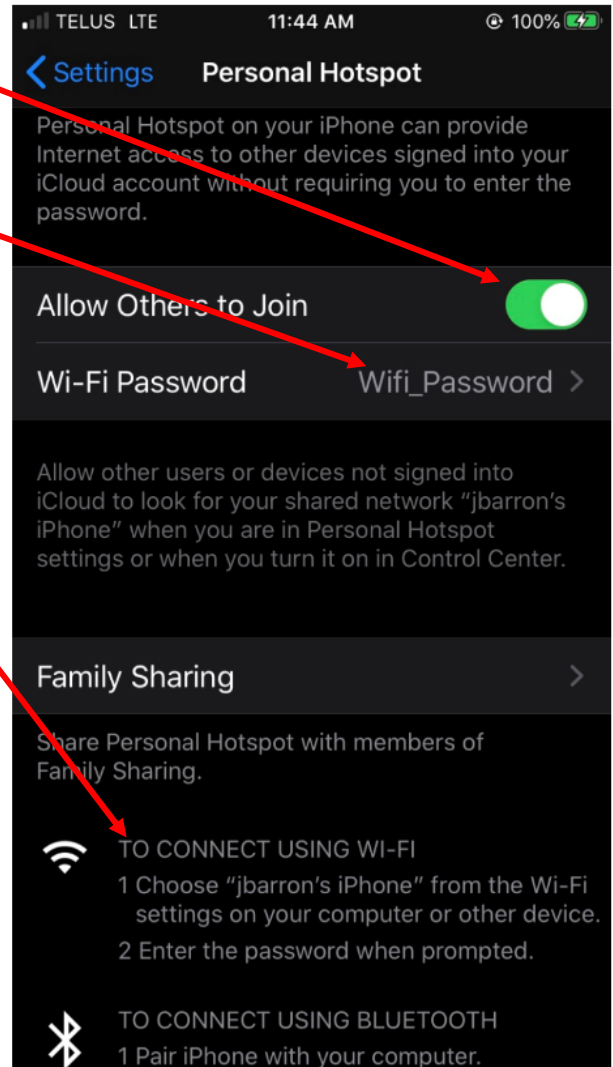

3. Enable > Allow to Join

On the device you need access to the internet on ie. iPad or laptop

This is the Wi-Fi password you will enter on your device.

Look for available WiFi Networks on your device.
You should see the name of your iPhone as an available network.

When finished turn off and disconnect from your phone.

**** NOTE** This is only to be used when there is no other WiFi available to connect to.**
